

Win an excursion to Reverse Garbage

How many Easter wrappers can we recycle?

Did you know aluminium is one of the most recyclable resources? However it only makes it through the machines if it is scrunched together bigger than a golf ball. It can be recycled into a soft drink can, a baseball bat, or more aluminium foil!

Reverse Garbage is offering an excursion for the primary class who makes the biggest ball of aluminium foil easter egg wrappers. This doesn't mean you need to eat more chocolate! Just ask your friends and family to collect for you as well.

Competition closes 5pm, 8 May. Entry form on www.reversegarbage.org.au
